PROJECT REPORT ON

“Online Course Selling”

Submitted to

Jijamata Art's & Sci College, Dnyaneshwar Nagar , Bhende Bk.

Department Of Computer Science, Bhende Bk.

In the partial fulfilment of the degree of

B.Sc(Computer Science) Sem-VI

By

(SEAT NO -18013)

Mr. Lokhande Abhishek Dnyaneshwar

Under the Guidance of

Prof. Jawale M.V.

CERTIFICATE

This is to certify that the project entitled “Online Course Selling” submitted by, Mr. Lokhande Abhishek Dnyaneshwar (18013) in partial fulfillment of the requirement of the award of degree B.Sc (Computer Science) sem- VI to Jijamata Art’s & Sci College, Dnyaneshwar Nagar Bhende bk. has been carried out by them under my guidance satisfactory during the academic year 2023-2024.

Place: Bhenda.Bk

Date: 12/04/2024

**Project Guidance
(Prof.Jawale.M.V)**

ACKNOWLEDGEMENT

This project work has been carried out under the guidance of Mr.Jawale.M.V Sir. I express my profound respect and gratitude to them for constant encouragement and sustain guidance throughout my project work I am obliged to them to constructive criticism ever helping attitude.

I am highly thankful to Mr. Jawale sir Head of Dept. for giving an opportunity to under this project for valuable suggestions.

We express our sincere thanks to staff members of Computer Science Dept. for their cooperation during our entire project. It won't justified if I failed to mention my parents who rendered their support and blessing towards the completion of this project and help me mentally, normally and financially in every aspect of my life.

Also thank to all friends who where always eager to help us.

Your Sincerely,

Mr. Lokhande Abhishek Dnyaneshwar (SEAT NO:-**18013**)

PROBLEM DEFINITION

Consider the basic things happening at the Online Course Selling

- A customer must have to present and need to confirm the course.
- Customer may check available courses.
- Select the appropriate.
- Customer must have to pay bill and take courses online which is time consuming.

NEED OF COMPUTERIZATION

Limitation of Existing System:-

- The main drawback of existing system is that it is very time consuming. Since the system is manual system, response time is also high.
- Existing system doesn't have proper security, as anyone can make the changes or delete the existing data.
- The system is concerned to particular users. Only the person, who manages is regularly, can handle it in a proper direction.
- The existing system is not capable for storing the many records because as the existing system is paper based system, there may be possibility of losing of record files.

Computerization is needed due to following advantages:-

- User friendly interfaces:-
- Quickly access your data:-
- It saves lot of Manpower.
- System gives accuracy of information without any errors.
- It stores lot of records, hence reduces stationary.
- It provides security & authenticity.
- Proper maintenance of the record.
- To maintain entire database frequently.
- Avoid repetitive entry.
- To avoid calculations mistakes.

- User Friendly: Web site gives fast access to the data and gives proper and accurate data .
- Updating is Easy: Any time administrator can add , delete and modify the web site.
- Viewing: The user can view special desert everyday.
- Search: User can search any kinds of online courses easily .

SCOPE OF THE SYSTEM

- Our project online course selling software has developed.
- In order to easy handling many options for searching the online courses and they confirm Course's of their choice .
- Our system includes the online live which is beneficial for customer.
- System is user friendly as it access to data and gives accurate data.
- System includes the searching of courses online so customer can easily purchase the courses.

Our system includes-

- Booking
- Courses
- Contact

FACT FINDING TECHNIQUES

Information gathering is very important while developing any system. In order to study a system what is required is the collection of data. Thus, this collection of data is known as fact finding technique.

The following methods have been adopted while making the fact finding technique:-

- Interview technique.
- Record review.
- Observation technique.

Interview Technique:-

Interview technique is used for the collection of the Quantitative information from an individual or a group. It simply includes questions and answers format to acquire Information. It arises with some of questions such as use Information, problems occurring in the present system, the Facilities required. This is the best technique in which Collection of maximum information from the users is done. By questioning the users we are able to study the system management and also collect good data accordingly. We have conducted a study to examine the processes involved in existing system. We have also noted down the views regarding the current system, and their expectation from the proposed system and accordingly we have designed the proposed system.

Record review:-

This method is used to establish information and find out type of data maintained. Information about the existing system is gathered with the help of records such as existing documentation by the user on the paper. Thus the Overview of what operation must be supported is obtained. This is the most beneficial technique for us while making our database. We studied the existing file structures, documents used and generated in the organization, need relation with other data item. Many kinds of records & reports were provided with valuable information that has been recorded about the system & user. We performed record inspection at beginning of study. The information given by users helped us to understand relation within organization.

Observation:-

Observation helps in finding alternative routes and procedures and helps in making proper usage documents. It allows to get proper information about Activities & procedure which are carried out. While finding the facts we kindly observed all the activities and transactions, uses of files and documents. Observation helped us in finding out actual way functioning apart from the ideal of desired. Observation allowed us to gain information, which could not be obtained by any other fact finding techniques methods. Through observations we could obtain fresh information about how activities were carried out in the office. This helped us when we wanted to observe actually how documents are handled, how are they processed & whether specified steps are followed or not.

HARDWARE AND SOFTWARE REQUIREMENT

Minimum Hardware Requirements:-

- Processor : core i3
- RAM : 2GB and above
- Hard Disk : 500 GB
- SSD :256GB

Minimum Hardware Requirements:-

- Front End: HTML,CSS,Bootstarp,Javascript,Jquery
- Back End: Node.js/express.js
- Database : MySQL
- Operating system : Windows 10,11
- Browsers : Mozilla Firefox ,Chrome
- Server :XAMPP Server

FEASIBILITY STUDY

The feasibility studies are useful for both users and analyst. The feasibility studies decide the assumed attitudes in the system development.

Feasibility study is the test of the proposed system according to its workability, impact on the organization, ability to meet the user's need and the effective use of the system.

To implement the system, the existing system needs to be upgraded taking into consideration the issue of speed, better programming language and better database access.

Feasibility study is carried out consideration the following aspects. Some of the feasibility studies are as follow:

Technical Feasibility:-

The technical feasibility study is carried out for the system to determine whether the planed system could be developed and designed in the organization using the existing technology, the technical evaluation also determined whether the existing system has ht expertise to use it. The organization is already well equipped with required hardware and software. The hardware currently available has good processing speed and has enough memory to support the softer. Hence the system is technically feasible.

Operational Feasibility Study:-

Operational feasibility ends at checking if the system if used will help to work in more efficient and accurate manner through all routine operations. The system is made compressive in nature, using a full menu driven system and appropriate user informative messages and warnings to avoid erroneous work and facility data integrity and consistency. On the contrary, the system is aimed at taking care of the complex procedure and automatic calculation. Thus the system is operationally feasible.

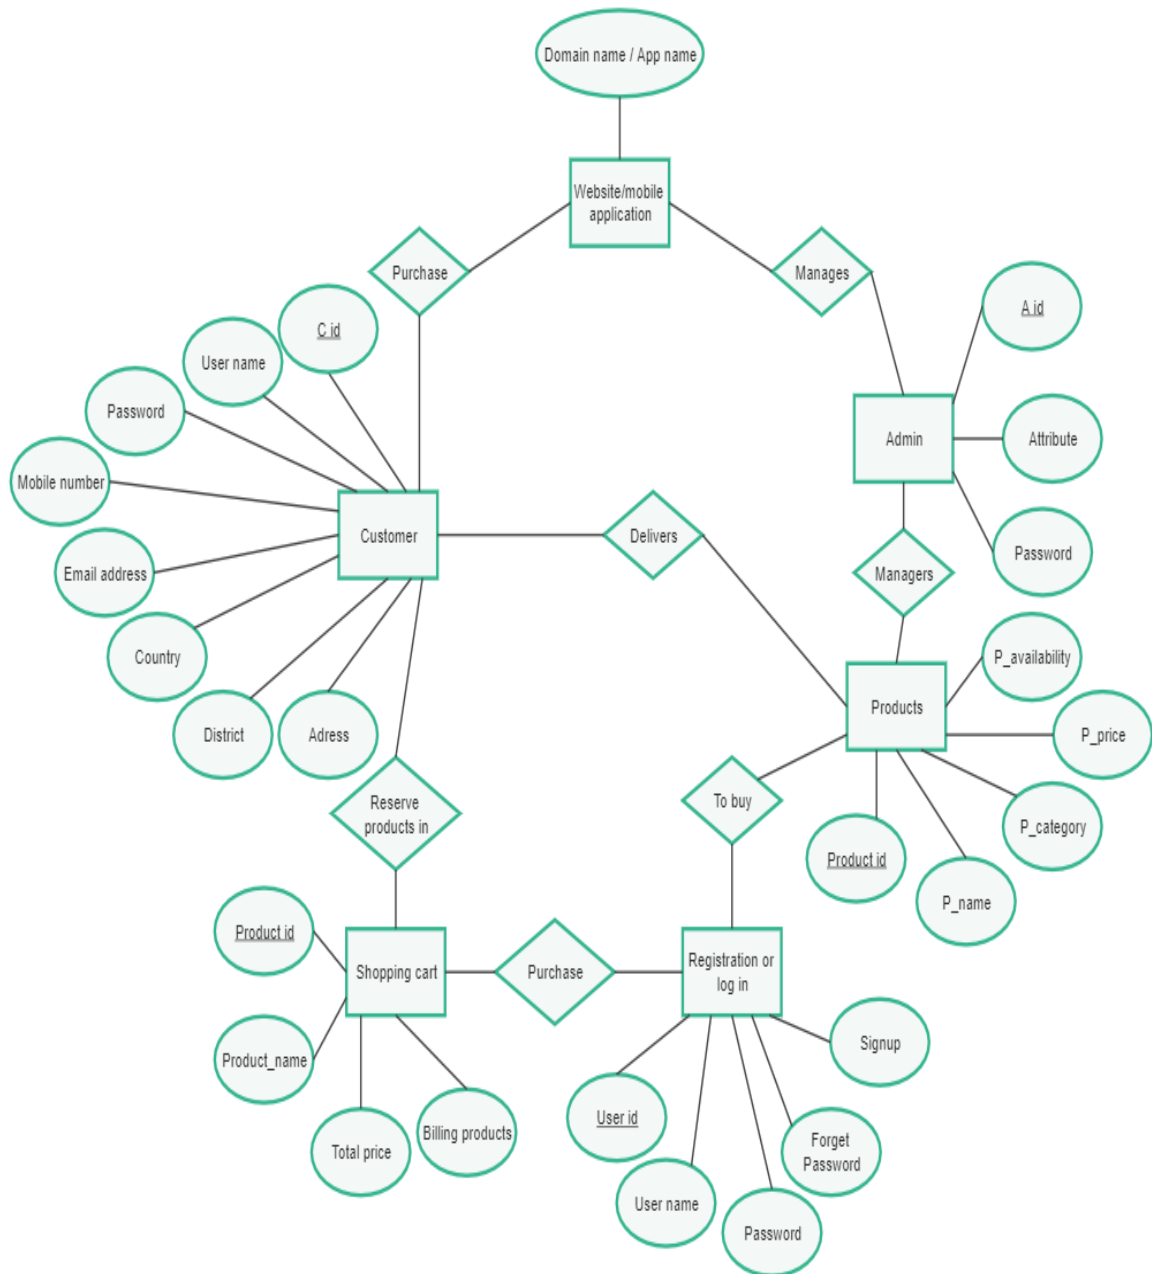

Economical Feasibility study:-

While considering economical feasibility, it is checked in points performance information, outputs from the system. Economical of the system at he financial experts of the projects. It determines whether the investment that goes into the implementation of the system is recoverable.

As the hardware and software already available and no investment are to be made in that direction ,the cost involved is that of implementing the system. Thus the system is economically feasible

DATA DICTIONARY

1. TABLE NAME : ADMIN

PURPOSE : THIS TABLE STORES ADMIN DETAIL.

Fields	Description	Datatype	Size	Constraint
admin_id	Show ID	int	40	Primary
admin_email	Show Admin Email	Password	20	Not Null
admin_mobile	Show Admin Mobile	Password	20	Not Null
admin_password	Show Admin Pass	Password	20	Not Null

2. TABLE NAME : CATEGORIES

PURPOSE : THIS TABLE STORE CATEGORY DETAILS.

Fields	Description	Datatype	Size	Constraint
cat_id	Show id of category	Int		Primary
cat_name	Name of the category	Varchar	40	Not Null
cat_details	Show All Details About Categories	Varchar		Not Null

3. TABLE NAME : COURSES

PURPOSE : THIS TABLE STORES COURSES DETAILS.

Fields	Description	Datatype	Size	Constraint
course_id	Number of courses	Int		Primary
course_name	Name of the course given	Varchar	40	Not Null
course_category	Show Course Category	Int		Not Null
course_duration	Show Duuration in Days	Int		Not Null
course_price	Show Price in Rs.	Int		Not Null
course_image	Show Course image			Not Null
course_video	Show Course video			Not Null
course_mentor	Show Course Mentor			Not Null
course_link	Show Course link			Not Null
course_platform	Show Course platform			Not Null
course_details	Show Course info..	Varchar		Not Null

4. TABLE NAME : QUERY USER

PURPOSE : THIS TABLE STORES QUERY DETAILS OF USER.

Fields	Description	Datatype	Size	Constraint
Qu_id	Number of delivery boy	Int		Primary
Qu_fname	First Name of user	Varchar	40	Not Null
Qu_lname	Last Name of user	Varchar	40	Not Null
Qu_mobile	Phone number of user	Int		Not Null
Qu_email	Show Email of user	Varchar		Not Null
Qu_query	Show queries of user	Int		Not Null

5. TABLE NAME : SLIDER

PURPOSE : THIS TABLE STORES SLIDER DETAILS.

Fields	Description	Datatype	Size	Constraint
Slider_id	Slider Number	Int		Primary
Slider_image	Show Slider Images			Not Null
Slider_title	Show Title of Slider	Varchar		Not Null
Slider_btn	Show Button			Not Null
Btn_link	Show button link			Not Null

6. TABLE NAME : USER PURCHASE

PURPOSE : THIS TABLE STORES PURCHASE COURSE DETAILS.

Fields	Description	Datatype	Size	Constraint
Purchase_id	Show Purchase ID	Int	40	Not Null
User_id	Show User ID	Int	40	Not Null
Course_id	Show Course ID	Int	40	Not Null
Amount	Show Course Amount	Int	40	Not Null
Purchase_date	Show Course Sell Date	Date	40	Not Null
Transaction_id	Show Transaction ID	Int	40	Not Null

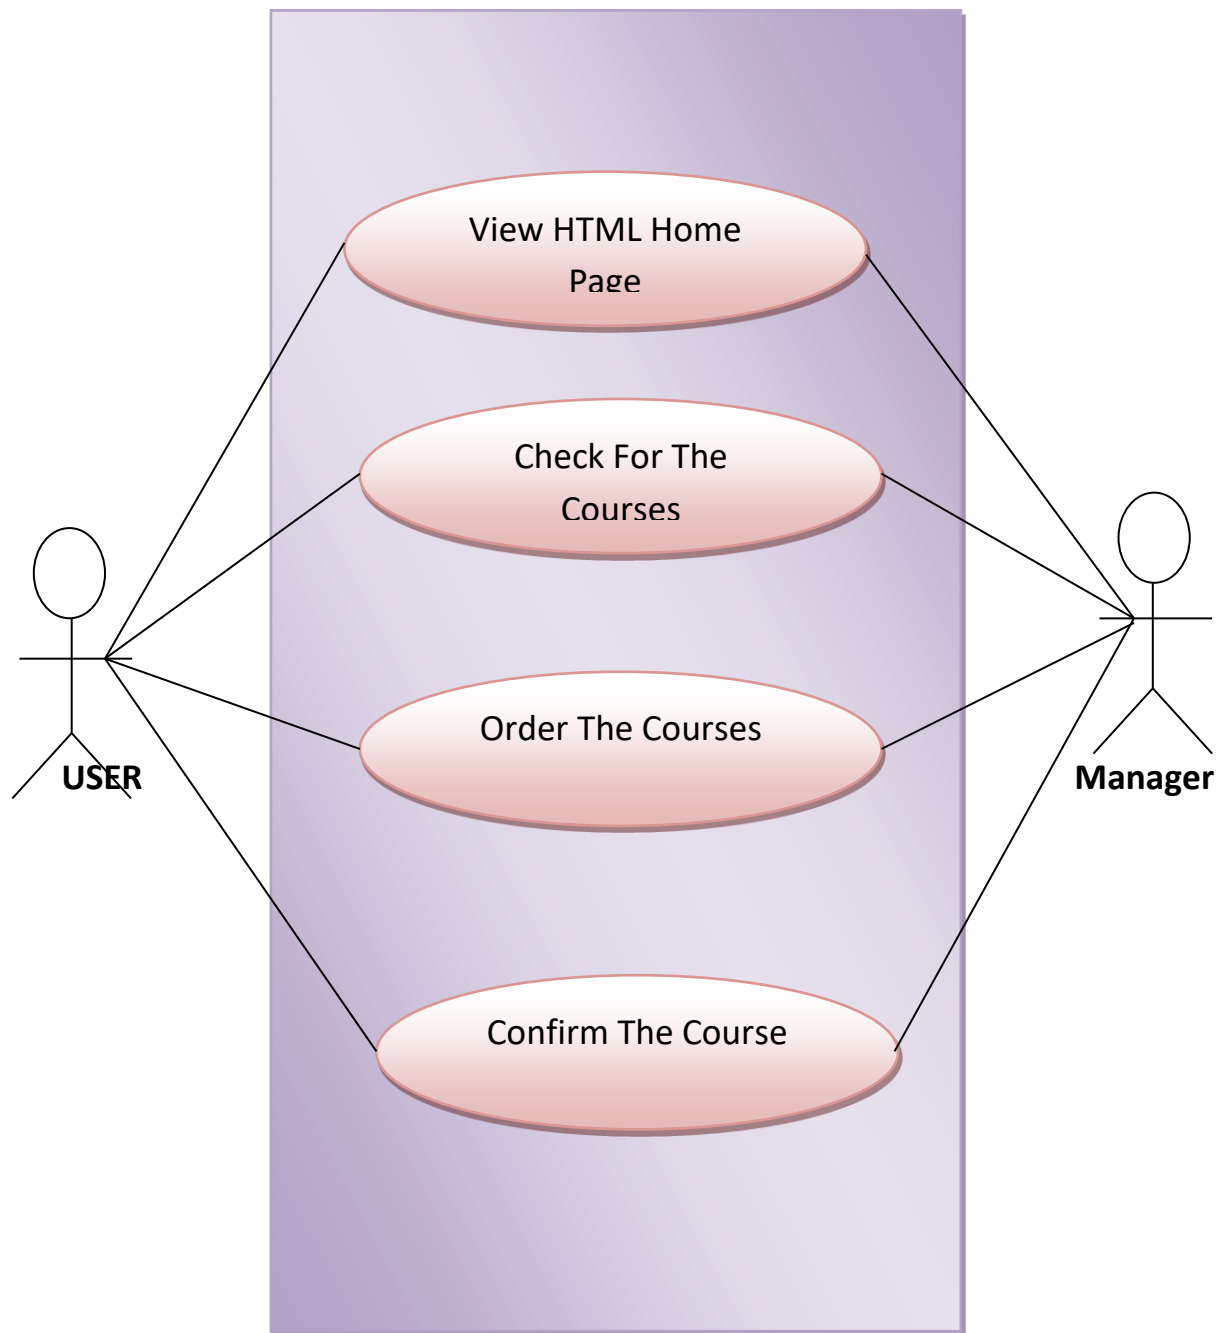

7. TABLE NAME : USER DETAILS TABLE

PURPOSE : THIS TABLE STORES DETAILS OF USERS.

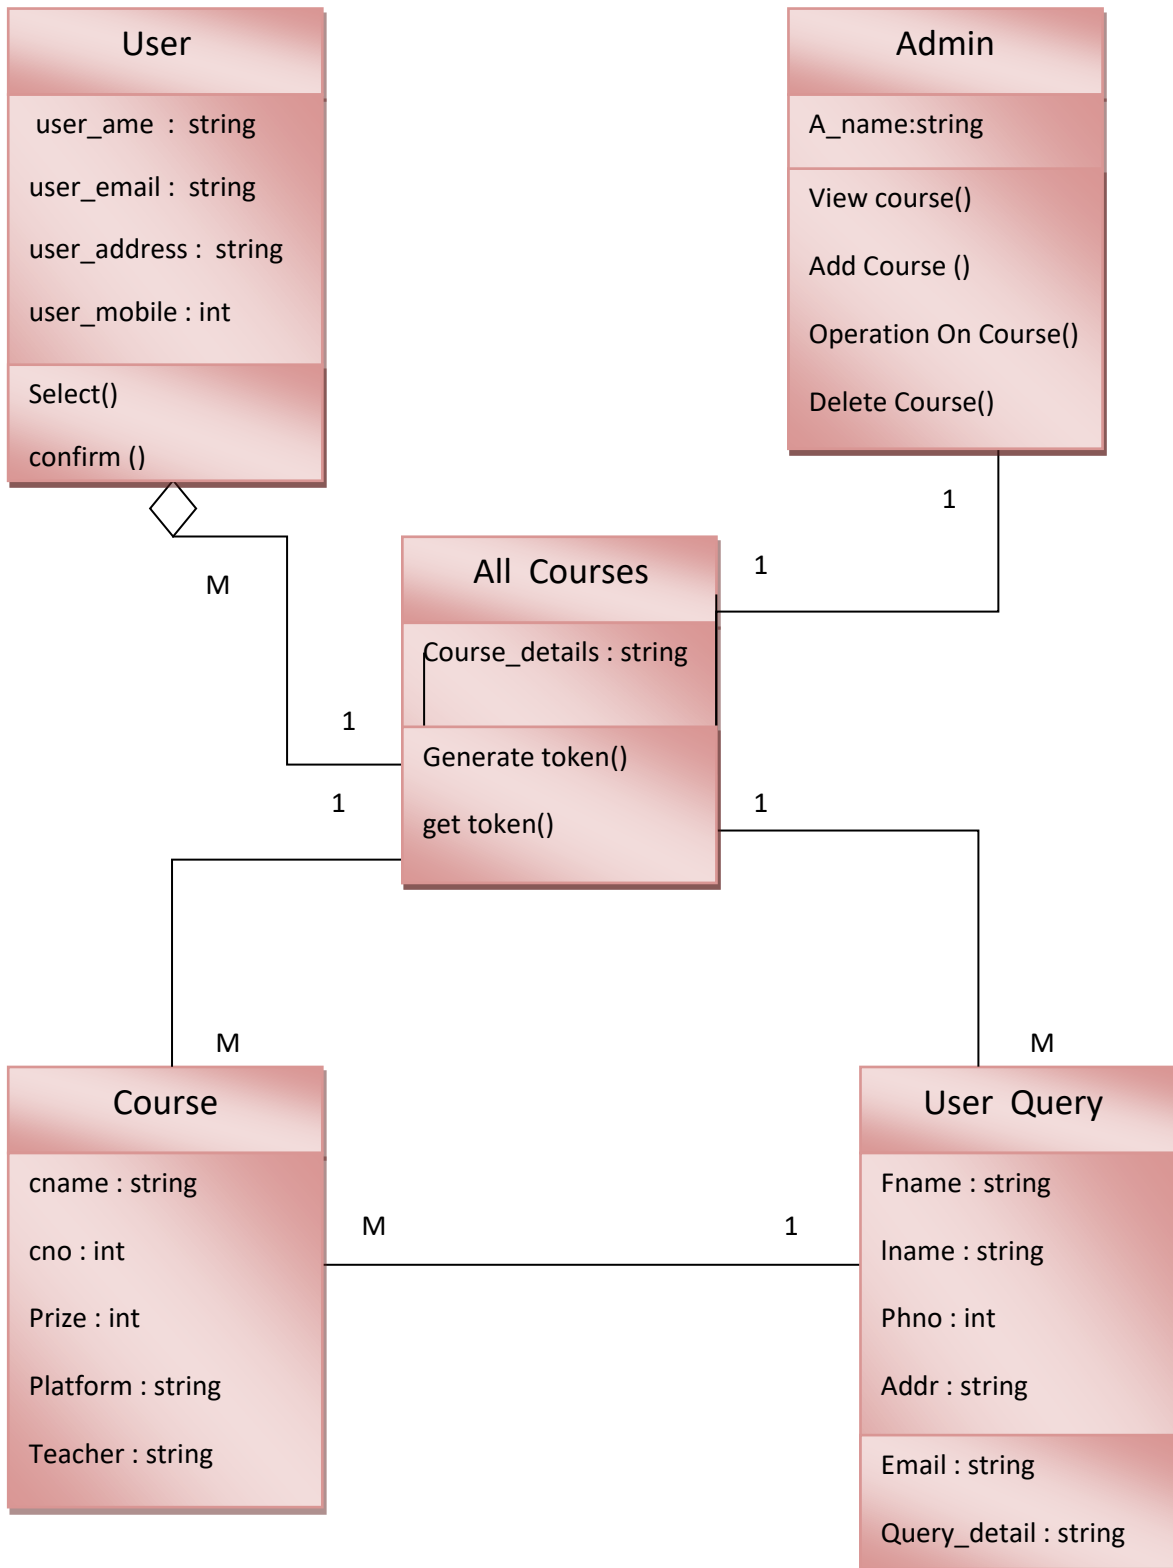

Fields	Description	Datatype	Size	Constraint
User_id	Show User ID	Int	40	Not Null
User_name	Show User Name	Text	40	Not Null
User_mobile	Show User Mobile	Int	40	Not Null
User_email	Show User Email	varchar	40	Not Null
User_password	Show User Password	Password	40	Not Null

Bootstrap is a popular open-source front-end framework used for building responsive and visually appealing websites and web applications. Developed by Twitter, Bootstrap provides a collection of CSS and JavaScript components, tools, and utilities that make web development faster and more efficient. It's designed to streamline the process of creating consistent and mobile-friendly interfaces while also offering customization options for

Node.js is an open-source, server-side JavaScript runtime environment that allows developers to build scalable and efficient network applications. Unlike traditional JavaScript, which is executed in web browsers, Node.js enables JavaScript to be run on servers, making it possible to create various types of applications, including web servers.

Java is a high-level, class-based, object-oriented programming language that is designed to have as few implementation dependencies as possible. It is a general-purpose programming language intended to let programmers write once, run anywhere (WORA),[16] meaning that compiled Java code can run on all platforms that support Java without the need to recompile.[17] Java applications are typically compiled to bytecode that can

TESTING STRATEGIES

Testing Plans :

Testing is an important part of software development cycle. It is considered to be the process of executing with the intention of finding errors. The preliminary phase carried as a practical approach of testing plan involved testing the different modules of the system independently to finding bugs. The later phase intended to link the different modules one by one as an approach to integrate the different modules of the system. Thus the result of testing ensured proper functioning of the system as per the specification of the user.

- **Unit testing:**

Here the focus will be on the modules and routine that are assembled and integrated to perform a specific function and those resulting the interaction between modules are initially avoided. Thus each program gets tested for its level of correctness.

- **Integration testing:**

During integrated testing each program was connected to its respective menu and the entire system was test from the top level i.e. From the menu to see individual programs were invoked properly.

➤ **Testing with sample data:**

To check whether the system is working in requirement or not, dummy data is to be entered and check for output and performance.

➤ **Handling the exceptional cases and detecting the error:**

The system should be able to handle exceptional cases. To test the system for exception handling, deliberately wrong data should be entered. The system must flash the appropriate error message or prevent the user from entering irrelevant or illogical data.

CONCLUSION

- System effectively work.
- The system works fast & saves time.
- System is user friendly.
- It provides the accurate information of Courses.

LIMITATIONS & DRAWBACKS

DRAWBACKS:-

- Mismatch the address of customer.
- Mobile number given by customer is not exists.

LIMITATIONS:-

- The minimum hardware and software requirements maintained in the software platform are a must else software will not work.
- Online i.e. working of project in networking is not possible.
- It supports only English language.
- The developed system is handled by a single administrator.

FUTURE ENHANCEMENT

- Online Razorpay Payments.
- Providing more Course's like Front-End/Back-End/App Development Technologies.
- User Cancel the Course.
